

The MACs for the class layout will be as follows: 0000000000XY. For each interface look in the table below to find the appropriate last 2 values. The pattern is pretty obvious. Find your group number on the left, follow it across to find the group's id that interface connects to and the intersection contains the last 2 numbers for that interface's MAC address. You will need to also correctly list the interfaces that connect to your gateway, including port, machine, and probably MAC address.

Group	Group 1	Group 2	Group 3	Group 4	Group 5	Group 7
Group 1		12		14		17
Group 2	21		23		25	
Group 3		32		34		37
Group 4	41		43		45	
Group 5		52		54		57
Group 7	71		73		75
